B17D	17'4" Harrow w/15 Loop Drawbar (Color Code White)	610	\$2,576.00
B19D	19'6" Harrow w/17 Loop Drawbar (Color Code Purple)	695	\$2,879.00
B22D	21'8" Harrow w/19 Loop Drawbar (Color Code Yellow/White)	825	\$3,334.00
B24D	23'10" Harrow w/21 Loop Drawbar (Color Code Blue/White)	920	\$3,637.00
B26M	26' No Drawbar-Used on Caddy only (Color Code Green/White)	1015	\$3,031.00

**Ideal for:**

- Preparing Seedbeds
- Covering seed
- Incorporating herbicides
- Spreading manure
- Hay and pasture renovation
- Horse track grooming
- Landscaping
- Made of 1060 Hi-Carbon 5/8" round steel for longer hinge point life
- 3" teeth on both sides – one side at 15 degrees for more aggressive harrowing, the other at 45 degrees for better trash harrowing and lighter action
- Self cleaning due to the unique tooth arrangement and framework

**FAQ's**

**Q: Why don't you have sections?**

A: Although there are some advantages to having sections, the "Bridge" Drag Harrow is sold only in sizes to utilize its unique design. Sections are used on large sizes however.

**Q: Are the teeth hardened?**

A: No, but the entire harrow is made from hard steel, 1060 is a high carbon steel. There is no need to harden teeth through heat treatment.

**Q: Would it be to severe covering seed?**

A: This has been a concern, however if the sloped tooth is used, it does work well covering seed.

**Q: Why can't it pull from the back? (Four Ways)**

A: There could be some advantages to having four choices, but the need is very limited. An attempt at that type of design would result in giving up some of the other unique qualities of our drag harrow.

**Q: How do you handle it?**

A: Many owners just simply drag it around. If your harrow is fifteen feet or less, it will fit through most gateways and it won't hurt your laneway or yard. It can be handled by lifting with a tractor loader. Or of course, you could make use of any part of our carrier system.

**Q: How come teeth are so short?**

A: Longer teeth will not penetrate ground more or do a better job. The harrow frame is designed to do a lot of the work (breaking lumps and spreading manure etc.) It will work better with harrow frame being closer to the ground.

**Q: Why doesn't it have more teeth?**

A: Our harrow does have fewer teeth than most chain harrows on the market, but with the framework of the harrow doing a lot of the work, a large number of teeth are not necessary. The teeth are positioned in such a way as to cause each tooth to go in a different spot along the ground.

**Q: Would it be too heavy?**

A: Our harrow is made from heavy steel, but it is not really that heavy total weight as design is just a little coarser than some.

**Q: Would it be hard to pull?**

A: It is actually easier to pull than other chain harrows. A rule of thumb is two horsepower per foot of harrow width. However this can vary depending on conditions.

## MAYBRIDGE CHAIN HARROWS

### 3PT HITCH LIFT FRAMES FOR MAYBRIDGE HARROWS

ITEMNUMBER	DESCRIPTION	PRICE
M79	3 Point Hitch Carrier For B7D And B9D Chain Harrows	\$1,439.00
