support@cummingsandbricker.com

Selling Points

1. Over 20 years of experience building brush cutters.
2. ASAE compliant: Hose sleeves, 3000# rated hoses, 3800# rated hydraulic motors.
3. 1/4" decks reinforced in front with 3/8"x2" "V" shaped nose angle.
4. Non-slip step for entry to skid steer.
5. Deck cannot be bent by lifting. Flux core welded bracing and flared skids for easy maneuverability.
6. Wear runners extend up the front of the deck so it can be used to clear deadfall logs.
7. Galvanized 5/16" safety chains front and rear.
8. Gearbox and motor preassembled onto a 1/2" steel plate, and then welded onto the deck. This eliminates misalignment problems.
9. Shear bolt protected at motor coupler.
10. Balanced stump jumper.
11. Welded collar on the bottom of the deck prevents weeds and wire from damaging gearbox seal.
12. Castle nut holding stump jumper and blade assembly does not extend below the stump jumper which prevents damage to threads on the shaft.
13. Counterclockwise blade rotation with high lift blades. Research shows that counterclockwise rotation provides better performance.
14. Top lock nut on blades for extra safety.
15. Built in safety cushion valve stops blades quickly when hydraulic flow is shut off.
16. Widest range of models available on the market.
17. Powder coated paint

EXCAVATOR MODELS

FOB C&B Warehouse = 42 & 48" - \$200; 60" & up \$500. Factory direct ship = Get freight quote.

***90" hoses and 1/2" flat face couplers included**

"X" Series cutters are designed for excavators.

4200X and 4800X for mini excavators, 6000X and 6600X for larger machines.

Prices do not include the hanger bracket to attach the cutter to the excavator. Hanger bracket prices vary depending on the excavator model.

When sizing an "X" series cutter it's important to know the flow and pressure available at the "stick"(end of the boom). This flow rate is often different than the overall flow rate shown for the whole machine. Factory guidance on model selection is recommended.
